Registry statement

This demonstration deed identifies the parcel using the authoritative Dag and Khatian values stored in the application database. It is intended only as sample input for OCR extraction and land-officer review in the mutation workflow.

Review boundary

Automated extraction may copy visible values from this file, but it does not approve, reject, or classify the mutation. Missing values must be entered by a land officer, who then chooses whether to accept the deed into the record or send it to fraud review.

Citizen signature	Land-office receipt
